

RESILIENCE

WHEN CANADA

NEEDS IT MOST

2022/2023 ANNUAL REPORT

Canada has always been a resilient nation. Through times of conflict, significant economic recessions, to the past few pandemic years, Canadians have pulled together and found ways to move forward. Perhaps it is Canadians' quiet resolve and collective sense of responsibility that has strengthened our resilience. We just get on with tackling difficult challenges and making things happen.

We are now in a period when Canada needs to again demonstrate resilience amid incredibly uncertain times. The impacts of the pandemic still linger. Canadians are struggling to keep up with high inflation and new costs that seem to have no cap. The path to economic sustainability is unclear. Challenges such as reimagining health care and restoring relationships with Indigenous nations are more essential than ever.

To build resilience across all these vital areas we need effective policy solutions. Such solutions should not be based on the loudest voices, the views of select groups, or the latest "evidence" found on the internet. Instead, policy should be the product of broad conversations based on shared knowledge, rigorous data, and thoughtful ideas about how to move forward. This is how policy professionals can help. I think this is how the School of Public Policy can help. We are both a convenor of important policy conversations and trusted providers of information for making difficult policy decisions.

The School of Public Policy has demonstrated resilience in the last year. After experiencing a period of uncertainty, our collective work has again positioned the School for renewed, distinct policy contributions. The University of Calgary has confirmed its commitment to retaining the School as a vibrant unit within the institution and has in fact started to imagine new ways the School can be a leader in transdisciplinary scholarship. We have received new funding to support expansion and curriculum innovation in our MPP program. Soon a new brand identity will be launched, and we eagerly await the arrival of a new, permanent Director.

Over the last year, I have witnessed remarkable resilience among the School's faculty and staff. They have dealt with uncertainty by recommitting to their work and demonstrating excellence daily. They continue to be the true heart of the School of Public Policy and are ready to help drive Canada forward. I encourage you to review this annual report. You too will be amazed at the range and depth of their work. They, and we, are ready to make Canada more resilient.

Jackie D. Sieppert

Our goal is to improve the options available to policymakers addressing the social, health, and well-being challenges of our time. Our community engaged research teams develop and observe practical options aimed at cutting through polarizing rhetoric and unlocking policy-making potential. We deploy a range of quantitative and qualitative methods within two key policy areas:

SOCIAL POLICY & HEALTH

SOCIAL POLICY

This research program focuses on producing evidence-based assessments of, and policy options for, the way social programs are designed and delivered.

Key topics include homelessness, intimate partner violence, income support policies, and policy issues related to poverty alleviation. Research outputs focus on providing pragmatic considerations and practical options to government and community-based providers of social programming.

HEALTH POLICY

The health research program is wide-ranging. Broadly, the School's researchers are engaged in identifying options to improve the organization and financing of health care, and models of care delivery and integration. Populations made vulnerable by systems are a key focus of the work. Current topics include research in disability policy and into the delivery of primary care, refugee and migrant care, neuro-diverse care, and family caregiver supports.

SPP health policy research teams work collaboratively with community partners and decision-makers to provide and deploy evidence-based options that will improve the lives of vulnerable children, youth, and adults with disabilities, mental health concerns, and long-term health challenges.

ENERGY & ENVIRONMENTAL POLICY

The Energy and Environmental Policy Research Division produces and disseminates research on energy infrastructure, energy markets, climate policy (including carbon pricing) and other environmental policy issues. This work supports improved decision-making and better outcomes for the environment and society. Our expert faculty and researchers are active in both the academic and policy space, leading to outputs that translate academic research into practical and actionable policy solutions.

FISCAL & ECONOMIC POLICY

The Fiscal and Economic Policy Research Division focuses on providing expertise in economic, fiscal, and social policy. We believe in understanding and acknowledging the diverse nature of society and how different factors intersect. Our approach also takes into account the influence of power structures and systems. By doing so, we aim to support inclusive economic growth and contribute to meaningful discussions in this field.

“Canada’s Approach to the TPP, the CPTPP and CPTPP Expansion: From Disinterested Observer to Ardent Supporter.”

Hugh Stephens

Through international travel, Director JC Boucher established important contacts with international organizations such as NATO Strategic Communications Centre of Excellence in Riga, Institute for Strategic Research at the Military School (IRSEM) in Paris, several Foreign Ministries (Latvia, Slovakia, Romania, etc.), and academic institutions in Australia and Germany.

14 MARCH 2023

“Canada’s New Indo-Pacific Strategy: A Critical Assessment.”

Hugh Stephens

Canadian Network on Information and Security

In August 2022 the first iteration of CANIS summer school took place. This course provided an advanced introduction to security and mis/disinformation in the Canadian and global contexts. The class focused on key issues and challenges related to mis/dis-information and the provision of security, and the significance of the information environment and its use as an operational domain.

Department of National Defence grant, which allowed the team to conduct a workshop examining the role of news media coverage on the development of national defence policy. The event gathered 25 participants encompassing academics, young scholars, government employees and defence and security professionals who were able to network and learn from each other's experience in the field.

Canadian Network on Information and Security (CANIS)

The first CANIS conference was held in Banff from March 22-24. The event brought together experts working on issues related to security and information environment. The two days were centered around panel discussions where Canadian and international specialists addressed some of the impacts and challenges that misinformation poses in our diverse societies.

DEVELOPING CANADA'S FUTURE POLICY LEADERS

Master of Public Policy (MPP)

Public Policy represents the intersection of values and goals and the practical implementation of laws, regulations, guidelines, and actions supporting those goals. But this process is subject to difficult political calculations, budget considerations, administrative hesitancy, and more. Students in our MPP program learn how to navigate this terrain from publicly engaged scholars, to enable practical and effective solutions to policy challenges and to efficiently communicate these ideas to others.

The MPP is a student-centred, transformative one-year integrated program that hones skills through hands-on training. Graduates go on to policy careers in both the public and private sectors.

Master of Science in Sustainable Energy Development (SEDV)

The Master of Science in Sustainable Energy Development (SEDV) is a leading interdisciplinary graduate program providing a balanced education related to energy and environmental management. The students benefit from the teaching and expertise of faculty members from the School of Public Policy, Haskayne School of Business, Schulich School of Engineering, School of Architecture, Planning, and Landscape, and the Faculty of Law.

We prepare graduates for senior roles in energy, in both the public and private sector, with a focus on the science of energy systems, and practical experience in conventional and novel project development, including fossil fuels, the transition to lower carbon sources of energy, demand-side management, energy efficiency, renewables and offsets. Graduates from the SEDV program understand the theory and have acquired skills in understanding the impacts of energy development on the environment, Indigenous Peoples, communities and the economy.
